SCA to build new wind farm and increases the degree of self-sufficiency in electricity

SCA is increasing its degree of self-sufficiency in electricity for its own industry by acquiring Fasikan Vind AB, a wind power project located on SCA's land in the Bräcke municipality of Jämtland County. The seller is Arise AB.

The acquisition is in line with SCA's wind power strategy, which includes leasing land to wind power operators, operating own wind farms, and project development for own operation or for sale.

Construction of the wind farm will begin in November 2023 and is planned to be operational at the beginning of 2026. The wind farm will consist of 15 turbines with a total installed capacity of 105 MW. Together with SCA's current electricity production, the additional production of 333 GWh from the acquisition will make SCA completely self-sufficient in electricity. The total investment is expected to amount to 1.7 billion SEK.

SCA also strengthens its ambition in project development by signing a separate agreement with Arise regarding joint project development for 6 designated land areas over the next 10-year period.

The core of SCA's business is the growing forest, Europe's largest private forest holding. Around this unique resource, we have built a well-developed value chain based on renewable raw material from our own and others' forests. We offer packaging paper, pulp, wood products, renewable energy, services for forest owners and efficient transport solutions.

2022 the forest products company SCA had approximately 3,300 employees and sales amounted to approximately SEK 21 bn. SCA was founded in 1929 and has its headquarters in Sundsvall, Sweden. For more information, visit
